

Session 3:

Writing an Introduction & Using Sources

19th April 2016

Agenda

- writing an Introduction
- using sources
 - gathering and evaluating
 - in text and end list
- 3-min presentation
- quiz results
- next

Logic Control Introduction Assignment

WRITING AN INTRODUCTION

LSP580 English, Division for Language and Communication

What is an introduction for?

- Some results of the mentimeter:

What is an introduction for?

Mentimeter

Catch the attention of the reader and give an overview

stuffy stuff that stuffs the stuffing into the other stuff so that the stuff can describe stuff.

Introducing your subject

An introduction is for introducing The reader to what The text is about

To introduce the reader to the subject. Give an Early view of the task.

To introduce what an assignment is about.

a quick overview

To give the reader an Idea what the text is about, may also catch the readers interest.

Helping the reader understand what the report is about and what he or she will learn from it.

It gives the reader an introduction to the report and give some sort of overview

Introducing

Present for the reader what the report is about and try to catch his interest

To catch the reader, and make him/her interested in reading more.

An introduction is for introducing the subject to the reader so that they can get an overview.

Introduce the subject and make the reader interested so he/she keeps reading.

Dank memes

To generally describe the theme and

Votes: 20

Importance of an introduction

- sets the framework of the project for the reader

In other words

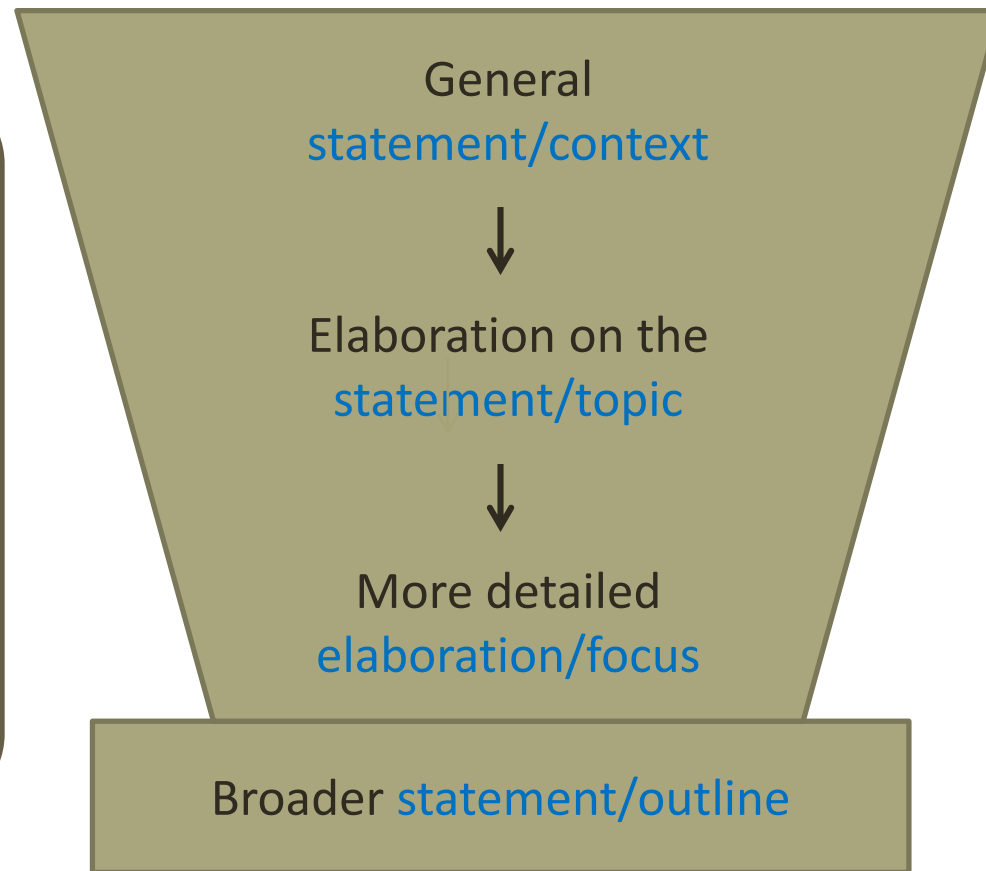

- presents topic
- 'hooks' reader
- gives context
- prepares reader with general info before specifics
- thesis statement: communicates to reader what text aims to discuss/prove/maintain
- indicates motivation for the paper
- outlines text structure

THE FUNNEL STRUCTURE: FROM GENERAL TO SPECIFIC (GS)

The GS-structure is
useful on several
levels:

- chapter,
- section,
- paragraph.

And in
Introductions

Some typical intro phrasing:

- define focus:
 - *This paper analyses the challenges of ...*
 - *The purpose of this report is to investigate advantages and disadvantages of ... / In this paper, a comparison between...*
- explain document structure:
 - *Four main points concerning advantages and disadvantages of ... will be discussed. First, Second, ...*
 - *In order to analyse ..., this paper will be divided up by.../into...*

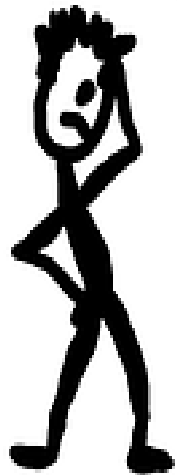

**“It’s called ‘reading’. It’s how people
install new software into their brains”**

Gathering and Evaluating USING SOURCES

Common source/reference issues

- Is it ok to have a technical text with no references in it?
- When should I use references/sources in my text? Which information needs a reference?
- Which sources should I be careful about using?
- Which reference system should I use?
- How do I reference an article I found online with no author?
- What is often incorrect in the end reference list?

How to find good information?

Just google it!

Is that the only strategy? What are some of the issues? Are there other strategies you can use?

Google Scholar....

Finding peer-reviewed sources

<http://lib.chalmers.se>

For access to databases with peer reviewed articles, connect to Chalmers Library. Here I have typed in 'green energy' to the main search box.

The 'general' search, even with newspaper articles excluded, still gives nearly half-a-million 'hits'. But if I start to tailor the search further, for example by checking to require 'Items with full text online' (so I can read the entire article) and 'Limit to articles from scholarly publications, including peer-review', then...

Is it peer-reviewed?

If you are uncertain as to whether a journal is peer-reviewed, you can check this resource, which most academic libraries provide access to online:

Ulrich's Web Global Serials Directory

Access via Chalmers Library at:

<https://ulrichsweb-serialssolutions-com.proxy.lib.chalmers.se/>

Adobe Warns of New PDF Attack Threat

April 8, 2010
By [Sean Michael Kerner](#)
[Submit Feedback »](#)
[More by Author »](#)

Adobe is warning users of its Adobe Acrobat and Reader PDF applications about a new attack that could potentially expose users to risk.

The attack leverages Adobe (NASDAQ:ADBE) Acrobat and Reader's ability to launch other content and applications.

Strictly speaking, the new attack vector isn't a flaw in Adobe's software but rather relies on social engineering to trick users into clicking on something they shouldn't, which could lead to arbitrary code execution. The company credits security researcher Didier Stevens for demonstrating the attack, which the U.S. Department of Homeland Security's U.S. Computer Emergency Readiness Team (US-CERT) also noted in an alert.

"When users open a PDF that contains a launch action, they are presented with a dialog box warning the user that a file and its viewer application are set to be launched by the PDF file," US-CERT [stated in its warning](#). "An attacker may be able to manipulate the content in the file name section of the dialog box in an attempt to convince users to open the file."

About Us

News by Sean Michael Kerner

- **Red Hat Expands Legal Firepower**, Mar 06, 2008
 It's a sign of the times when a [Linux](#) vendor issues an announcement about the hiring of legal talent.
- **SCO's Restructuring Tightrope**, Feb 20, 2008
 Yes, I was quick to jump on the SCO gets \$100 million lifeline story. And yes there is always more story to tell.
- **'Linux Next' Begins To Take Shape**, Feb 15, 2008
 Make no mistake about, the Linux 2.6.x kernel is a "large" undertaking that just keeps getting bigger and bigger. Apparently it's also getting harder to maintain as well in terms of ensuring that regressions don't occur and that new code is fully tested.
- **The Linux Desktop Paradox**, Jan 13, 2008
 Nearly every year for the last decade I've heard some pundit or vendor proclaim from the rooftops: This is the year of the Linux desktop. Yet, year in and year out, the proclamations don't materialize.
- **KDE 4: a New Dawn For The Linux Desktop?**, Jan 12, 2008
 With a new visual [interface](#) including new themes sounds and effects as well as a semantic file manager, speed and multimedia handling improvements, KDE 4 is a major release for the Linux desktop.
- **RPM 5: a Fork in The Linux Packaging**, Jan 10, 2008
 The newest version of the popular RPM package manager is now out

Netstat -vat by Sean Michael Kerner (bio)

A command line view of IT

Sean Michael Kerner writes about Linux (distros the kernel and the community), Open Source (licenses, applications, management and legal), Security (tools, attack vectors, vendors and exploits) Application Development (tools, vendors, dynamic languages and code) as well as Networking (core equipment, carrier, enterprise, Ethernet, IPv6 and access control).

Kerner takes a deep technical view on everything he writes and has years of hands-on experience with many of the core technologies he writes about. When not writing, Kerner can be found experimenting with the latest Open Source technologies, looking for software and security defects and fixing network configuration issues. He has also been known to spend inordinate amounts of time looking at satellite images of Roswell, New Mexico and is a student of the Klingon language. Kerner has been contributing to InternetNews.com since 2003.

Evaluating a Source

- The Kerner-example, using Kerner as reference:
 - Con: not affiliated to any specific company or university, the credibility is decreased
 - Pro: a great number of published articles found on several known sites, increasing the credibility
- ❖ References are a way of supporting your claim. The validity of those references directly affect the validity of your claim.

In text and End List

USING SOURCES

Using your sources in text

Paraphrasing, Quoting, Plagiarizing

- **Paraphrasing**: incorporating other people's ideas **using your own words and with references.**
- **Quoting**: an exact copy of an original phrase within quotation marks. Full reference given.
- **Plagiarizing**: using ideas, results, words without giving proper reference to the original.

Essentials of English p.344-352

See Chalmers policies on academic integrity and honesty:

<https://student.portal.chalmers.se/en/chalmersstudies/joint-rules-and-directives/Pages/Academicintegrityandhonesty.aspx>

How to Paraphrase

- Read and try to understand the main ideas of the text
- Express the ideas in your own words
- Change the organization of the ideas
- Signalling that you are paraphrasing:
 - "According to [X]..."
 - "[X] claims that/stated that/argued that..."
 - "It was demonstrated by [X] that..."
- Reporting verbs
<http://www.gcu.ac.uk/student/coursework/writing/reporting.html>

Referencing RULES

There are many rules for referencing. Not possible to memorize them all, just know how to look them up.

For the assignments on this course and Göran's, use the **IEEE system**. Options:

- manually: link on PingPong to one guide
- use the function in Word or
- use a software, e.g. EndNote
- IEEE author's guide
http://www.ieee.org/documents/info_authors_kit.pdf
(**page 4** referencing)

❖ IEEE system arranged in citation order, not alphabetical order!

Referencing online sources

- Careful with **electronic sources**: check guide for details to be included, i.e. not just a weblink!
- **Journals**, regardless of whether exclusively online or exclusively in print (or both) still need the important journal information: author, year, title of article, journal name, volume/issue, page range.
- If it is exclusively an online journal you also need the URL
- Erring on the side of **too much information is better** than missing out on important information.

Logic Control Introduction Assignment

3-MIN PRESENTATION

Presenting in this course

- Study wk 4 logic control introduction assignment presentation (individual), 3 min, no visual aids
- Study wk 8 presentation of LET085 projects (group), 10 min, visual aids to be used
- When planning a presentation (however long it will be), **always** think about the following:
 - **Content, structure, delivery and language**
 - Useful information and phrases in Schedule and Course information handout

Why a presentation as well?

- to summarise and clarify a discipline topic
 - in a spoken format
 - in English
- to practice presenting in English ahead of longer, more formal presentation at end of course
- to practise selecting appropriate information for the spoken arena
 - adapt for a different register – how you write and how you speak is different!
 - structured for a listener to learn something

❖ not just a chat!

Learning outcomes:

- *extract, summarize and organize relevant information*
- *practice adapting written text to a talk providing an overview*
- *practice giving a presentation in English in a well-structured way*

Requirements

Prepare and give a presentation where you will share your findings from your sources in a small group.

- you shouldn't read your findings but make a speech with keywords
 - summarise the contents
 - motivate why you picked out these sources
 - where do your sources come from, what's their context?
- 3-minute-presentation, no ppt necessary
- ❖ Try to structure it logically – think about your listener and what's the easiest way for them to absorb the info

GRAMMAR QUIZ - RESULTS

LSP580 English, Division for Language and Communication

Grammar Quiz and Practice

≤ 59% = U

≥ 60% = 3

≥ 75% = 4

≥ 90% = 5

- With **60% or more**, you will have passed and completed the grammar requirements for the written exam, i.e. no exam 30th May

However:

- **below 60%**, OR if you wish to improve on the level you achieved, take the exam 30th May
 - some grammar focus in class during course
 - the EngOnline web-based grammar tool for individual language training space

Next:

- 3-min presentation in class next week, 26th April
- LC-Intro assignment due in 29th April

Next session lecture focus: writing a report in English, of the LET085 project report
